# Mountain Weather Forecast

**Ground Conditions Supplement**

Date: Sunday 7 February. Location: Helvellyn summit at 13:00. We are continuing to provide the Fell Top Reports for people undertaking their daily local exercise during the lockdown. We would like to remind everyone that Government guidance stipulates that people should only exercise locally to where they live. The high fells of the Lake District are currently in full winter condition with significant amounts of snow on all aspects although the western fells appear to have less coverage. Crampons & ice axe are essential for anyone venturing above the snowline. The snow level is now around 400m on Helvellyn but there were significant patches of ice on paths below this altitude. The snow is beginning to consolidate and stabilise in the colder temperatures. Generally there is a breakable crust over calf to knee deep snow which will sometimes hold bodyweight but overall makes for very slow going. Where walkers feet have compressed the snow the going is easier but icier. Striding & Swirral Edges are both buried under deep snow with a few protruding rocks on which rime ice was actively forming above 850m. There has been a significant amount of avalanche activity in the last few days with multiple tracks noted in all the high Helvellyn corries. However the snowpack is now beginning to refreeze and stabilise. The exit slopes to both Edges were passable with careful route choice and the correct equipment. The forecasted low temperatures mean that the snowpack will become icier and more serious with the potential for long slides / falls. Full winter clothing and equipment including ice axe and crampons are essential for anyone venturing onto the fells. The depth of snow also means that many paths and obvious features are hidden so excellent navigation is critical. Goggles were very useful today to protect the eyes from the snow showers and grauphal but also to increase contrast when looking for hazards like cornices and cliff edges. Please be conservative with your plans and know both your limits and also when to turn back. A pandemic is not the time to be pushing your comfort zone. Temperature: minus 7.0C, Maximum wind speed 61.1mph, Wind chill: minus 23.0C, Average wind speed: 50.4mph.
